

Orion StarC is a simple software tool developed to give every company the ability to accurately report their logistics CO2 emissions.

Simply incorporate the Orion StarC reporting tool within your existing systems and the Carbon footprint is automatically calculated and reported. By using existing relevant commercial and operational data from within your system very little setup and maintenance is needed.

The Carbon footprint can be reported as an aggregated figure or as individual transaction costs. You can report the Carbon costs by Customer, service type, per branch, per department or division or look at the effects of different distribution models in planning future operations.

Orion StarC gives you maximum competitive advantage by enabling you to be transparent about your environmental targets and your progress based on accurate and current data.

Clearly there are significant commercial benefits to be gained from reducing your carbon footprint and perhaps two of the most tangible are that costs are simultaneously reduced and it

also delights customers.

Having the ability to focus on reducing CO2 emissions in your business allows you to effectively manage total energy consumption.

Lower CO2 delivers lower costs, delighted customers and better environment.
