

Different computer systems and businesses use different terms to manage their businesses, **Orion StarLink**

provides seamless interchange enabling the real-time 2 way flow of all appropriate data through various methods such as http/https, XML, ftp, or email.

Linking with your existing back office systems to form a complete enterprise solution which links suppliers, partners and sub-contractors. This technology drives automation and efficiencies throughout the supply chain and makes sure that all departments and Partners are operating from the same business critical information. Duplicated and unnecessary processes are clearly identified resulting in greater efficiency. The benefits are tangible and immediate - improved business planning, productivity gains and genuine cost reduction.

Improving the 2 way data flow between your system and your logistics partner **Starlink** manages the data flow between the various logistics execution systems including Warehouse management systems, transport management systems and Sub-contractor / partner relationships.

Orion StarLink

delivers the automatic and dynamic selection of the most appropriate supplier for any or all required services and manages the real-time data flow with clear visibility.

Data Interchange
