

The **Orion Star range** is a modular set of web based logistics IT solutions that together form an enterprise wide system. Alternatively, individual modules can be utilised to seamlessly enhance and support existing systems.

The **Orion Star** modules assist you to:

- **Improve productivity** – better planning, flexibility and faster execution
- **Reduce costs** – increase volumes within existing resources
- **Reduce your Carbon footprint** – green your logistics and achieve better returns

The exact status of a single transaction or a complete overview of the logistics process is constantly available to all who need to know. Comprehensive and detailed reporting supports dynamic scheduling, routing and live tracking information. Organisations which are burdened with outdated IT systems and processes cannot address the modern competitive challenge and the inevitable result is lost revenues, higher than necessary costs and loss of the competitive advantage.

The **Orion Star range** is genuinely innovative, flexible and scalable, it will enable you to:

- **Meet customer demands** and respond speedily to competitive pressures
- **Work smarter** by removing unnecessary processes and work closer with partners
- **Improve management** of the supply chain
- **Accurately report** performance levels
- Manage and report on the all important **Carbon footprint**
